

**PIENAAR ENERGY (PTY) LTD**

# **Solar inverter current negative number**

## Overview

---

If the load shows a negative symbol, then that means that the unit is in AC coupled mode. AC coupled is selling power to the grid from the AC output of the inverter. Let's say I have 10 combiner boxes that are connected to an inverter, and while the inverter is running I see 3 combiner boxes recording negative. Device display The Inverter RS Smart Solar has an LCD screen that displays operational information. Inverter: Inverter state, Power output, Frequency and AC Voltage Battery: Battery Power (charging shows positive number, discharging shows negative number), Current, DC voltage, Temperature (\*). A solar inverter display typically shows information about the current power output, total energy production, and any system errors or issues. The analysis covers various types of solar inverter configurations and.
