

**PIENAAR ENERGY (PTY) LTD**

# **Solar power supply wind power and energy storage**

## Overview

---

A Wind-Solar-Energy Storage system integrates electricity generation from wind turbines and solar panels with energy storage technologies, such as batteries. Without proper energy storage solutions, wind and solar cannot consistently supply power during peak demand. Integrating this renewable energy supply to the electrical power grid may reduce the demand for centralised production, making renewable energy systems more easily available to remote regions, thereby. Solar, wind, and batteries are set to supply virtually all net new US generating capacity in 2026, according to EIA data reviewed by the SUN DAY Campaign, continuing their strong 2025 growth. EIA's latest monthly "Electric Power Monthly" report (with data through November), once again.

## Solar power supply wind power and energy storage

### EIA: 99%+ of new US capacity in 2026 will be solar, wind + storage

Solar, wind, and batteries are set to supply virtually all net new US generating capacity in 2026, according to the latest EIA data.
