

**PIENAAR ENERGY (PTY) LTD**

# **Solar system in wetlands of the Netherlands**

## Overview

---

Floating solar panels are an increasingly common sight in the water-rich Netherlands as a way of producing sustainable energy. The first large solar farms have been. The Fieldlab Green Economy Westvoorne is located on shores of the Oostvoornse lake and offers us space for a variety of research projects on floating solar energy systems. This is a location with wave category 2. The former landfill now generates enough electricity for about 2,500 households. Set to consist of 15 islands on the Andijk Reservoir in North Holland, 15 floating solar islands, containing 73,500 panels, will be the first sun-tracking islands of this size in the world. Along Europe's 68,000 kilometers of coastline, offshore solar innovations are transforming challenging marine environments into.
