## Overview

---

Where temperatures below about 95 °C (200 °F) are sufficient, as for space heating, flat-plate collectors of the nonconcentrating type are generally used. Because of the relatively high heat losses through the glazing, flat plate collectors will not reach temperatures much above 200 °C (400 °F) even when the heat transfer fluid is stagnant. Such temperatures are too low for to electricity.

### Concentrating Solar-Thermal Power Systems

CSP systems are the integrated collection of the many different processes and components required to collect, convert, store, and deliver solar-thermal heat. Learn more about how CSP works.

## What are the components of a solar thermal system?

The components that a solar thermal energy system needs in order to work. The main ones are solar collectors, a

heat exchanger and an accumulator.

## Solar thermal power plant

Solar thermal power plants are electricity generation plants that utilize energy from the Sun to heat a fluid to a high temperature. This fluid then transfers its heat to water, which then becomes ...
