Solar thermal power station molten salt

Overview

Improved molten salt technology is increasing the efficiency and storage capacity of solar power plants while reducing solar thermal energy costs. 1 gigawatt-hours of energy storage [1] located near Tonopah, about 190 miles (310 km) northwest of Las Vegas. It can reach temperatures as high as 565 degrees Celsius and is used to boil water when electricity is needed. Operators can take advantage of a new ternary. A molten salt solar tower is a renewable energy plant designed to capture solar energy and convert it into electricity. By using solar radiation to heat a. Completed the TES system modeling and two novel changes were recommended (1) use of molten salt as a HTF through the solar trough field, and (2) use the salt to not only create steam but also to preheat the condensed feed water for Rankine cycle.
