South Korea Wind Power System Battery Plant

Overview

5GW offshore wind power plant in South Korea will be paired with energy storage provided by so-called 'next generation' lithium-ion batteries. Singapore-Norwegian company G8 Subsea, a specialist in subsea engineering and floating and offshore renewable energy projects, has signed an agreement. Wind power is a form of renewable energy in South Korea with the goal of reducing greenhouse gas (GHG) and particulate matter (PM) emissions caused by coal based power. This move underscores the country's growing urgency to manage renewable energy intermittency. As of now, South Korea has identified a total of 128 offshore wind farms, with 116 currently under development, representing a substantial capacity of 44 GW. However, only 10 OWFs are operational, contributing a commercial capacity of 124.

Overview
Current projects
Current uses
Limitations
Government policies

The Singapore-based subsea engineering company, G8, received approval to build a 1.5GW offshore wind farm in late December 2021. The project is planned to be built off the south-west tip of South Korea with the build site having recorded wind speeds of 7-8 m/s. Current plans are to begin construction, as well as marine works in 2023 or 2024. The project also involves the use of an advanced, long-life lithium ion energy storage system from 3DOM, a technology partner of G8.
