Southern Europe multicrystalline solar module prices

Overview

These modules are now priced at around EUR 0.12 per watt, marking an all-time low for the sector. According to the monthly index published by Germany's pvXchange Trading, the downward trend persists, driven largely—if not entirely—by. Every month we publish a current price index on the development of wholesale prices of solar modules. In doing so, we differentiate between the main technologies available on the market. Over recent months, solar module prices across all major technologies have remained largely steady, with only minor downward adjustments in select. The European market for photovoltaic (PV) modules witnessed a significant period of stability in October 2025, with prices settling “at the bottom” after a period of decline. This newfound equilibrium marks a crucial shift from the fluctuations observed in previous months as the market finally. Solar module prices in Europe have risen after months of decline, driven by price increases from Chinese manufacturers and a tight supply of popular modules in the European market. Domestic pricing refers to “tax-included, excluding freight,” and export prices refer to “FOB/CIF.
