

**PIENAAR ENERGY (PTY) LTD**

# **Switzerland Zurich strictly prohibits the use of lithium batteries for energy storage**

## Overview

---

Currently, there are no public regulations on the storage of lithium batteries. But shouldn't be seen as a "free pass to do nothing". According to REACH, lithium batteries are simply products and, by definition therefore, not hazardous substances. Lithium-ion batteries power a wide range of devices, from smartphones and laptops to power tools, electric vehicles, and energy storage systems. By way of principle, batteries are distinguished between those with a power capacity of up to 100 Wh and those. Important rules of thumb for the everyday handling, storing and charging of lithium-ion accumulators are the following: Figure 1: ZARGES box for storage and transportation of lithium-ion accumulators. RISCAuthority membership comprises a group of UK insurers that actively support a number of expert working groups developing and promulgating best practice for the protection of people, property, business and the environment. They have an increased sensitivity to high temperatures which must be considered when using or storing.
