

**PIENAAR ENERGY (PTY) LTD**

# **Technical indicators of waste lithium battery energy storage**

## Overview

---

This review examines the status of development, process performance and life cycle environmental impact of the three major recycling routes for lithium ion batteries and considers the impact of changes in legislation in the European Union (EU). With the rise in electric vehicles, renewable energy storage, and consumer electronics, recycling lithium-ion batteries has become a critical solution to address resource scarcity and environmental challenges. This appendix outlines areas of research centered on the unique challenges of LIBs. This presents a daunting task for governments, companies, and academics when discussing and developing initiatives for the EoL of LIBs.

## Technical indicators of waste lithium battery energy storage

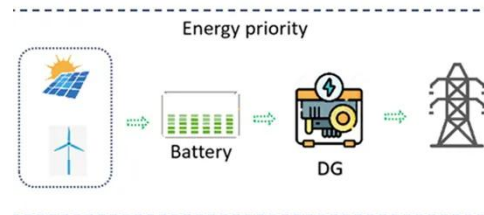

### DRAFT Appendix D: Lithium-Ion Batteries

Determine how to ensure LIBs are discarded, stored, and transported safely considering ignitability (D001) and reactivity (D003). Provide avenues to prevent mixing LIBs with other battery types when ...

### Lithium-ion battery recycling report , CAS and Deloitte

Recognizing the need for a comprehensive analysis of this rapidly evolving industry, CAS and Deloitte have worked together to develop this in-depth report covering both market and scientific perspectives.
