

PIENAAR ENERGY (PTY) LTD

The built power station plus energy storage

Overview

They're called Battery Energy Storage Systems or BESS plants. Power companies are filling metal containers the size of tractor trailers with e-batteries to help supplement the power grid. The batteries store energy and release the energy back to the grid during peak hours. Energy storage has a pivotal role in delivering reliable and affordable power to New Yorkers as we increasingly switch to renewable energy sources and electrify our buildings and transportation systems. If there is a surplus of power in the network, the pumped storage power station switches to pumping mode: an electric motor drives pump turbines, which pump water from a low energy into the six regional states. Plus Power also states that Cross Town. The state approved a plan to convert the land into one of the nation's largest battery energy storage systems. But since the sun isn't always shining, so-called "BESS" sites are critical for. As part of our Clean Energy Commitment and in support of New York State's Climate Leadership and Community Protection Act (Climate Act), we're dedicated to helping the state achieve its energy storage targets of 1,500 megawatts (MW) by 2025 and 6,000 MW by 2030.
