

PIENAAR ENERGY (PTY) LTD

**The photovoltaic bracket is a
channel steel with holes**

Overview

One commonly used component in PV mounting systems is the C channel, also known as a C purlin. But what makes steel the go-to material for solar mounting systems?

Let's break down the essential types, their unique advantages, and how to choose the right one for. Future Energy Steel offers a wide range of high-quality photovoltaic brackets specifically engineered for modern solar energy systems. Designed for durability and precision, our brackets ensure stability and efficiency in residential, commercial, and industrial applications. Each product complies. Driving Mechanism: The driving mechanism usually adopts electric or hydraulic system to drive the bracket to rotate through the command of controller, so that the solar panel can rotate horizontally and vertically with the sun trajectory. The general materials are aluminum alloy, carbon steel and stainless steel.

The photovoltaic bracket is a channel steel with holes

Solar Bracket System C Channel for Solar Panels

The C channel for solar panels features pre-punched holes for convenient attachment of brackets and solar panels, reducing labor time and costs. The galvanized coating on the steel provides superior ...
