# The place with the most photovoltaic panels

## Overview

---

According to the International Energy Agency Snapshot 2024, China alone accounted for over 60% of new global photovoltaic capacity in 2023, with the top 10 countries collectively representing a significant majority of the market. As of 2023, China has the largest solar energy capacity in the world. Most operational CSP stations are located in Spain and the United States, while large solar farms using photovoltaics are being constructed in most geographic regions. The worldwide growth of photovoltaics is extremely dynamic and varies strongly by country. In April 2022, the total global solar. Solar energy capacity is growing rapidly, driving the global transition to renewable energy. This blog post analyzes the global distribution of solar panels, highlighting the countries with the highest solar power capacity, the factors.

### Solar power by country

Overview Europe Global use figures Africa Asia North America Oceania South America

European deployment of photovoltaics has increased considerably since the year 2010. Cumulative solar PV capacity in the European Union reached over 300 GW in 2024, with industry projections anticipating total capacity more than doubling by 2030, which would take solar power's share in EU electricity generation (9.2% in 2023) over 20%. Outside of the EU, similar growth in solar power is taking place in the United Kingdom...
