

PIENAAR ENERGY (PTY) LTD

The proportion of wind power and solar power installed capacity

Overview

Solar and wind accounted for 93% of new U. electricity capacity additions in November 2025, making solar PV the leading new source of electricity for 27 consecutive months, according to a review of FERC data by the SUN DAY Campaign. The year-on-year increase in electricity demand – the fifth largest year-on-year increase this century.

The proportion of wind power and solar power installed capacity

US Electricity 2025 - Special Report

The US clean electricity transition continued as wind and solar generated more than coal for the first time. Electricity demand growth sped up and solar generation rose more quickly than gas ...
