## Technical Article

In previous years, each rack in a data center was designed for 6kW power density. However, when faced with high density racks of 15kW or above, facilities clearly do not meet requirements.

## 100+ kW per rack in data centers: The evolution and

Twenty years ago, 100+ kW per rack data centers would have been an irrational topic to present at data center

events. Today it's not only possible, but it's becoming a reality.
