

PIENAAR ENERGY (PTY) LTD

Three-phase solar inverter model application

12.8V6Ah

Nominal voltage (V):12.8
Nominal capacity (ah):6
Rated energy (WH):76.8
Maximum charging voltage (V):14.6
Maximum charging current (a):6
Floating charge voltage (V):13.6~13.8
Maximum continuous discharge current (a):10
Maximum peak discharge current @10 seconds (a):20
Maximum load power (W):100
Discharge cut-off voltage (V):10.8
Charging temperature (°C):0~+50
Discharge temperature (°C): -20~+60
Working humidity: <95% R.H (non condensing)
Number of cycles (25 °C, 0.5c, 100%dod): >2000
Cell combination mode: 32700-4s1p
Terminal specification: T2 (6.3mm)
Protection grade: IP65
Overall dimension (mm):90*70*107mm
Reference weight (kg):0.7
Certification: un38.3/msds

Overview

Three-phase PV inverters are generally used for off-grid industrial use or can be designed to produce utility frequency AC for connection to the electrical grid. This PLECS application example model demonstrates a three-phase, two-stage grid-connected solar inverter. The presented system implements a dual-stage conversion structure, using a boost DC/DC. This new monitoring platform will empower you like never before. is applied in PV systems to achieve power line communication. The inverter converts DC power from renewable sources into AC power synchronized with the grid, enabling efficient and stable integration.

Three-phase solar inverter model application

A study on the dynamic model of a three-phase grid-connected ...

In this paper, we first find the operating point of a given voltage source converter in an analytical form. Then, using time-domain simulations, the operating point of the con-verter is obtained, similar to that ...
