

**PIENAAR ENERGY (PTY) LTD**

# **Torque value of photovoltaic bracket**

## Overview

---

For aluminum connectors, a typical torque range is between 8 and 12 Nm (Newton-meters) for M6 bolts and between 15 and 20 Nm for M8 bolts. Torque is a measure of the force that causes an object to rotate. In the context of photovoltaic bracket connectors, it's the amount of force you need to apply when tightening the bolts or screws to secure the connectors in place. If you don't apply enough torque, the connectors might come loose. Please refer to the below chart for the appropriate torque specs. Do NOT tighten with impact gun. Ensuring Structural Integrity Fasteners are crucial for firmly connecting solar modules, mounts, and other components. Lock nuts, the K value can vary between 0. Use Prevailing Torque and secure various equipment and structures. Maximum Power - this is the maximum power output of the PV.

## Torque value of photovoltaic bracket

---

### What is the torque value of the photovoltaic bracket

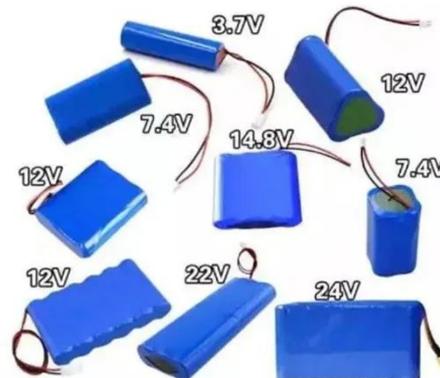

According to ASE-certified instructions, when installing the mounting bracket bolts, the brake caliper torque specs should be between 70 and 90-foot pounds. Besides, tighten the two mounting bolts with ...
