

**PIENAAR ENERGY (PTY) LTD**

# **Trial construction of grid-connected microgrid**

## Overview

---

This study aims to develop a cost-effective microgrid design that optimally balances the economic feasibility, reliability, efficiency, and environmental impact in a grid-tied community microgrid. Resilience, efficiency, sustainability, flexibility, security, and reliability are key drivers for microgrid developments. These factors motivate the need for integrated models and tools for microgrid planning, design, and operations at higher and higher levels of complexity. This complexity ranges. Sources of renewable energy, e. solar, are increasingly being acknowledged as viable supply-side choices for microgrids.

## Trial construction of grid-connected microgrid

---

### Grid-Connected Microgrids: From Research to Sustainable Implementation

Many of the grid-connected microgrids online today (most notably in the USA) relied on this type of model. It is generally perceived as a traditional approach to microgrid development, but also a mature, ...

## Full-scope simulation of grid-connected microgrids

As part of the project, a Full-scope Microgrid Simulator was created (FMS), allowing researchers to study various controlling schemas in different weather conditions, without disturbing the
