# What are the differences between photovoltaic bracket accessories

RS485  
Communication between battery and inverters  
Baud rate:9600bps

RS485 Interface  
Communication between parallel packs or BMS and PC  
Baud rate:9600bps

## Overview

---

They are available in various lengths, widths, and thicknesses, depending on the size of the solar panels, tilt angle, supporting span distance, wind loads, and clamping configuration. Refers to the components used to connect between straight segments and between straight segments and bends to form a continuous photovoltaic bracket system, which is necessary for connecting and fixing or supplementing the straight segments and bends. As a foundational component. Photovoltaic panel brackets are the unsung heroes of solar installations. According to the connection form, it is divided into welding type and assembly type; according to the installation structure, it is divided into fixed type and day by day type;. The photovoltaic bracket system consists of pipe piles, columns, diagonal braces, purlins, diagonal beams, and other accessories, which is a specialized bracket that is used to place, install, and fix the solar panel in a solar photovoltaic power generation system. The general materials include aluminum alloy, carbon steel, and stainless steel.

## What are the differences between photovoltaic bracket accessories

---

### Components and classification of solar photovoltaic brackets

Solar photovoltaic brackets come in two main types--fixed and adjustable. Fixed brackets are designed to hold the solar panels at a predetermined angle, typically suitable for regions ...
