# What are the independent energy storage power stations in Latvia

## Overview

---

This article explores companies developing energy storage power stations in Latvia, market trends, and the role of battery systems in grid stability. Additional to the three major hydroelectric plants, there are approximately 150-160 operational hydroelectric plants with capacity below 5 MW each. In Latvia, developer Utilitas Wind announced the official opening of a 10MW/20MWh battery energy storage. Latvia's energy system is largely based on renewable resources, primarily hydropower from the Daugava River, supplemented by wind, solar, and biomass. While natural gas imports cover energy shortages, the country aims to increase wind and solar energy capacity, with significant progress already. The Battery Energy Storage System (BESS) is one of the most important projects in the synchronisation of Baltic power grids with the continental Europe electricity system in order to ensure operational stability and the reliable supply of electricity. Neighbouring countries are Estonia (to the north), Russia (to the east), Belarus (to the south-east), and Lithuania (to the south).
