What does 158 solar panel cell mean

Overview

Monocrystalline solar panels, such as the 158mm 415w monocrystalline solar panel, are renowned for their high efficiency rates. This means that they can convert a greater amount of sunlight into electricity compared to other types of solar panels. What is it?

PERC cell technology defines a solar cell architecture that differs from the standard cell architecture that has been in use for three decades and. Mono and polycrystalline cells are the most common types of cells used in solar panels. This piece focuses on three lines you see on every module label: VOC, ISC, and STC. A solar panel spec sheet provides valuable information about the operating parameters of a panel and can help designers, engineers, and installers determine how to configure a solar PV system.
