

## PIENAAR ENERGY (PTY) LTD

# What is wind power generation utilization hours

## Overview

---

The utilization hours of power generation equipment refer to the indicators reflecting the utilization degree and level of production capacity of power generation equipment. Data source: Energy Institute - Statistical Review of World Energy (2025); IRENA (2025) - Learn. Wind Watch is a registered educational charity, founded in 2005. 49% of electricity in the United States. Energy Information Administration's (EIA) Hourly Electric Grid Monitor show an hourly record set late in the day on December 22 and a daily.

OverviewHistoryEconomicsNational trendsWind power by stateCommercialization of wind powerOffshore wind powerWind energy meteorology

Wind power is a branch of the energy industry that has expanded quickly in the United States over the last several years. In 2024, 451.9 terawatt-hours were generated by wind power, or 10.49% of electricity in the United States. The average wind turbine generates enough electricity in 46 minutes to power the average American home for one month. In 2019, wind power surpassed hydroelectric power as the largest renewable energy source in the U.S
