What kind of fish can be kept in the locker

Overview

Commonly sold species of fish include Common/Comet Goldfish - that should get over 10" long and live over 20 years; Rosy Red Minnows, that get 4" and need to be in groups; or Guppies which need a large, preferably tropical, fish tank. You can keep fish anywhere that you can provide for them. It's okay to leave them in the dark overnight. Dim. If you've caught your own fish, bury them in ice immediately or use an ice slush with two parts ice to one part water to keep your catch cold. To store fresh fish, pack whole dressed fish. Whether you're an avid angler or a casual fisherman, preserving the quality and flavor of your catch is essential to fully enjoy the fruits of your labor. All of these species are relatively peaceful, non-demanding, excellent choice for first-time fishkeepers. Tiger Barbs, known for their striking appearance and spirited nature, are a captivating and hardy option for bottom. However, several types, preferably small cold-water fish, can live happily and comfortably with limited space, heat, or filter, such as Guppies, White Cloud Minnow, and many more.
