

PIENAAR ENERGY (PTY) LTD

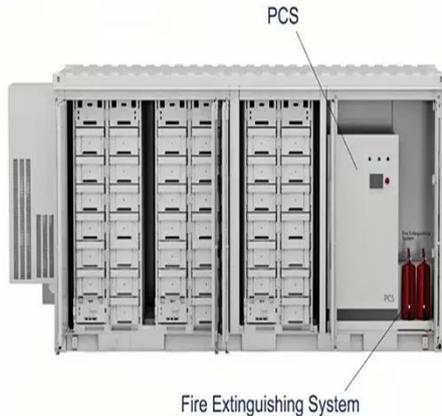

Whether double-sided photovoltaic panels are more expensive or single-sided

Overview

Double-sided solar panels are generally more expensive than single-sided solar panels due to their more complex design and additional materials. The Efficiency Debate: Do Bifacial Panels. Key Features of Double-Sided Panels: One of the biggest distinctions between the two technologies is cost. However, bifacial panels, though more expensive, often deliver. This graphical abstract summarizes how this work performs a comprehensive techno-economic analysis worldwide for photovoltaic systems using a combination of bifacial modules and single- and dual-axis trackers. This means faster payback and lower cost of energy (LCOE) for solar. Increased Energy Production: Bifacial panels generate 5–30% more power by capturing sunlight from both sides, including reflected light from snow-covered ground—helpful when removing snow from solar panels isn't immediate. Better Low-Light Performance: They efficiently absorb diffused and reflected.
