

PIENAAR ENERGY (PTY) LTD

Which is better strong light or hot light

Overview

If the room is functional, like a kitchen, utility room, or home office, cool light stimulates productivity and wakefulness and is better suited to activities. Finding the right lighting for each room in your home is important. Here's a comprehensive look at the. Before the advent of CFL and LED lights, there were limited options for energy-saving lighting, and almost all incandescent bulbs gave off that same, warm, yellowish glow of light. Fast forward to today and a trip through the lighting department of your local hardware store most likely offers you. Even when brightness is the same, the color of the light can completely change how a room feels. But which one will work best for you and why?

Based on how warm or cool their color is, lights are put into two groups: warm and cool. Lower color temperatures, between.
