

**PIENAAR ENERGY (PTY) LTD**

# **Which is cheaper photovoltaic panels or racks**

## Overview

---

Including racking and mounting, an average 6kW solar system would cost about \$18,000 given the US average solar panel cost of about \$3.00 per watt as of January 2023. Getting about \$40 per panel. Those are interesting but annoying they don't just have an online store or something. In real life, NLR analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems. This work has grown to include cost models for solar-plus-storage systems. NLR's PV cost benchmarking work uses a bottom-up. Most homeowners are aware of rooftop solar panels, but ground-mounted systems are another option for those who have limited roof space or otherwise want to avoid attaching solar panels to their rooftop. Ground-mounted racks are also available. At Greentech Renewables, we've generated a table in order to provide a rough overview of the approximate costs of several mounting options.
