Which should the solar inverter be connected first positive or negative

Overview

It is essential to connect the positive and the negative wires to the inverter first. Connect inverter negative to battery negative 3. Make sure the connection is secure. Now you can connect the pure sign wave inverter. Before hooking your solar panels up to an inverter, however, you need to learn how solar panel wiring works. It allows technicians or emergency responders to safely shut off all DC power from the panels. It transforms direct current (DC) generated by solar panels or stored in batteries into alternating current (AC), which powers your household appliances.
