

## PIENAAR ENERGY (PTY) LTD

# Why do photovoltaic panels charge automatically

## Overview

---

Solar panels charge batteries by converting sunlight into DC electricity. The electricity first passes through a charge controller, which regulates voltage and prevents overcharging, ensuring the battery's longevity. It protects your battery from overcharging and uses algorithms to constantly monitor and optimize the charging process so you can maximize. Understanding Solar Panel Functionality: Solar panels convert sunlight into electricity using photovoltaic cells, which generate direct current (DC) vital for charging batteries. What is this?

Key Components of Solar Panels: Essential components include photovoltaic cells, a protective glass layer. A solar-to-battery charger forms the link between the solar energy-producing array and the energy storage system, which, in this case, is the battery or bank of batteries. The charger can. State of Charge (SOC) indicates the remaining charge in a deep-cycle battery which depends on the prevailing weather, the type of battery, its lifespan, and its condition.
