Why do photovoltaic panels use silicone

Overview

Backsheet silicone coating keeps water, UV rays, and dirt away from solar panels. This helps panels last longer and work better. So what exactly is silicone solar sealant, and why is it so important to photovoltaic (PV) modules?

Let's discuss its role, benefits, and how it can extend the lifespan of solar panels and make them more efficient. In essence, Silicone Solar Sealant is a neutral-curing, solvent-free sealant. Among the various options available, silicone adhesives and sealants have emerged, offering numerous benefits. ELASTOSIL[®], WACKER[®] and HELISOL[®] are registered trademarks of Wacker Chemie AG. Recent studies show: Between 9% and 16% of PV modules have backsheet problems. Silicone-coated panels get back up to 97% of their power after cleaning, but uncoated panels only get up to 83%. Among them, the performance of silicone right adhesive is particularly outstanding, so why.

Why do photovoltaic panels use silicone

SILICONES FOR SOLAR APPLICATIONS

In order to improve a solar module's degree of efficiency, a transparent liquid silicone can be used to encapsulate the solar cells. This is particularly important for tailored solar panels that cannot be ...
