

**PIENAAR ENERGY (PTY) LTD**

# **Why use 12MW for energy storage solutions**

## Overview

---

Thanks to this locally available energy storage, a synchronous machine can conduct energy transactions with the grid in the early stages of power mismatch events and before higher-level controls respond. This natural response reduces frequency deviations and helps to maintain the. In the dynamic world of renewable energy as of mid-2025, Battery Energy Storage Systems (BESS) stand out as vital technology for enhancing grid reliability, integrating renewables, and improving energy efficiency. Global deployments of BESS in the first half of 2025 have surged by 54%, reaching. Then, by analyzing three key dimensions—renewable energy integration, grid optimization, and electrification and decentralization support—we explore potential strategies, benefits, business models, and use cases that can equip the power sector with tools to help unlock storage technology's. Alfen is building Finland's third largest electrical energy storage facility for EPV Energy's Teuva wind farm. When completed in spring 2023, the facility will support EPV Energy's renewable electricity strategy and enable several innovative applications like black start functionality. From iron-air batteries to molten salt storage, a new wave of energy storage innovation is unlocking long-duration, low-cost resilience for tomorrow's grid.

## Why use 12MW for energy storage solutions

---

### The Ultimate Guide to Battery Energy Storage Systems (BESS)

BESS represents a cutting-edge technology that enables the storage of electrical energy, typically harvested from renewable energy sources like solar or wind, for later use.
