

PIENAAR ENERGY (PTY) LTD

Wind power and photovoltaic power generation time in a year

Overview

As a result of new solar projects coming on line this year, we forecast that U. solar power generation will grow 75% from 163 billion kilowatthours (kWh) in 2023 to 286 billion kWh in 2025. power generation for the next two years. Growth in utility-scale and distributed solar PV more than doubles, representing nearly 80% of worldwide renewable electricity capacity. Wind and solar combined produced a record 17% of US electricity in 2024, overtaking coal at 15% for the first time. The year-on-year increase in electricity demand - the fifth largest year-on-year increase this century.

Wind power and photovoltaic power generation time in a year

Report: Solar, wind power grew faster than electricity demand this year

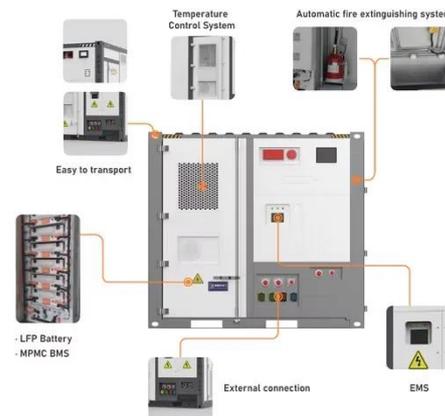

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal, ...

Variability of wind and solar power production throughout the year

PV output is high in summer, low in winter and peaks daily around noon. Production from wind shows a highly stochastic behavior, with slightly higher values in winter.
