

PIENAAR ENERGY (PTY) LTD

Wind turbine blade model making

Overview

This tutorial demonstrates the 3D design of a wind turbine rotor blade in SolidWorks, including load simulation, results, and assembly process for passive control. The model estimates the bill of materials, the number of labor hours and the cycle time, and the costs related to direct labor, overhead, buildings, tooling, equipment. Build the prototype of a wind turbine blade with fiber glass, cardboard, software, tools and affordable or free materials. The 5 blade sections slot together with a lock and key mechanism. You can order a kit from the STELR website (link below) if you don't already have one.

A Detailed Wind Turbine Blade

Cost Model

This work aims to define a detailed parametric blade cost model for modern multimegawatt wind turbine blades via vacuum-assisted resin transfer molding (VARTM).
