Windjun 5 generator plug voltage

LPW48V100H
48.0V or 51.2V

Overview

NEMA 5 plugs and receptacles are three-wire (hot-neutral-ground) grounding devices rated for maximum voltage of 125 V, though they are commonly referred to as 120 V plugs/sockets, since that is their usual nominal voltage. Commonly, generators give the 20 and 30 Amp ratings and use no less than one locking plug generally a L5, L10, or L14 with a couple for standard duplex plugs. For RV. The generic standard for AC power connectors in North America is ANSI/NEMA WD 6-2012. It defines believe it or not, about 150 different styles. That's why wiring the plugs or cords may be confusing to the users. Luckily, only a handful of outlet types are practically used in portable generators. Here are some key components that can be found in a typical 240 volt Understanding 3 Phase Wiring Diagrams.
